Portfolio: yuridelimadev.github.io

PROFESSIONAL SUMMARY

Computer Science undergraduate at UFPB with experience in threat intelligence and security operations automation. Developed DoBotShield, a Go WAF and reverse proxy with traffic inspection, access controls, and automated tests. Works with web and API security, evidence analysis, and REST integrations.

PROFESSIONAL EXPERIENCE

Vultus Cybersecurity Ecosystem

May 2025 to Aug 2025

Threat Intelligence Intern

- Collected and contextualized indicators of compromise and attack techniques from open sources, bulletins, and feeds, mapping evidence to MITRE ATT&CK to support alert prioritization.
- Organized campaigns and findings into intelligence reports for detection and response teams.

Alianca Motos

May 2024 to Apr 2025

IT, Automation, and Software Development Intern

- Developed Python and Streamlit applications to process PDFs and spreadsheets, reconcile records, and generate Excel reports.
- Built JavaScript and Chromium automation to collect catalog data and export it to Excel, replacing manual steps.

LIM | Interaction and Media Laboratory

Sep 2024 to Nov 2024

Associate Researcher, temporary and hybrid

- Contributed to software design and research projects alongside the internship at Alianca Motos.

IT4US Cyber Security

Aug 2023 to Dec 2023

Security Playbook Automation Intern

- Created and maintained SOAR playbooks for triage and response, automating repetitive steps and documenting handling workflows.
- Developed scripts and REST integrations to normalize SOC events and handle workflow exceptions.

TECHNICAL PROJECTS

DoBotShield | Go WAF and reverse proxy

- Implemented request, response, and WebSocket inspection, payload normalization, rate limiting, IP/CIDR controls, and structured logs. The repository documents tests and security checks in CI.
github.com/yurIdeLimaDev/DoBotShieldV2

AI as a Pool | Asynchronous architecture

- Contributed documentation and C4 diagrams for an architecture using FastAPI, Celery, RabbitMQ, Redis, and PostgreSQL, separating user requests from AI generation with retry and fallback strategies.

EDUCATION

Federal University of Paraiba (UFPB)

2022 to Dec 2026 (expected)

Bachelor of Science in Computer Science

TECHNICAL SKILLS

Security: Application security, WAF, web and API security, OWASP Top 10, threat intelligence, OSINT, IOCs/TTPs, MITRE ATT&CK, SOAR, SQLMap, and OWASP ZAP

Engineering: Go, Python, JavaScript, FastAPI, REST APIs, Git/GitHub, Docker, GitHub Actions, CI/CD, and Linux

Data: PostgreSQL, Redis, and RabbitMQ

Languages: Native Portuguese | Fluent English | Fluent Spanish
