PROFESSIONAL SUMMARY

Computer Science undergraduate at UFPB with experience in Threat Intelligence, SOAR automation, and internal solutions development. Developed DoBotShield, a Go WAF and reverse proxy evaluated across 48 scenario combinations using SQLMap, OWASP ZAP, Commix, and wrk. Works with web and API security, Go, Python, JavaScript, Docker, CI/CD, and REST integrations.

PROFESSIONAL EXPERIENCE

Vultus Cybersecurity Ecosystem

May 2025 to Aug 2025

Threat Intelligence Intern

- Collected, enriched, and contextualized approximately 150 IOCs per month and TTPs from open sources, bulletins, and feeds, correlating evidence with MITRE ATT&CK and reducing alert prioritization time by 19%.
- Produced an average of three intelligence reports per week, consolidating campaigns and findings into actionable records and reducing evidence organization rework for detection and response by 20%.

Alianca Motos

May 2024 to Apr 2025

IT, Automation, and Software Development Intern

- Developed Python and Streamlit applications to process PDFs and spreadsheets, reconcile records, and generate Excel reports, reducing manual processing time by 33%, errors by 24%, and saving around six hours per week.
- Implemented a JavaScript automation with Chromium to collect catalog data and export it to Excel, reducing task time by 49% and data inconsistencies by 27%.

LIM | Laboratory of Interaction and Media

Sep 2024 to Nov 2024

Associate Researcher, temporary and hybrid

- Worked on software design and research projects.

IT4US Cyber Security

Aug 2023 to Dec 2023

Security Playbook Automation Intern

- Created and maintained SOAR playbooks for triage and response, automating 31% of repetitive steps and reducing average initial response time by 21%.
- Developed REST integrations that processed around 200 events per day, reducing manual effort by 18%.

TECHNICAL PROJECTS

DoBotShield | Go WAF and Reverse Proxy

- Developed a defensive security layer with request, response, and WebSocket inspection, payload normalization, rate limits, IP/CIDR rules, structured logs, and checks for tests, static analysis, race conditions, fuzzing, and vulnerabilities in CI.

AI as a Pool | Asynchronous Service Architecture

- Contributed to the architecture of a FastAPI, Celery, RabbitMQ, Redis, PostgreSQL, and Docker service, documenting C4 design, retry and DLQ flows, circuit breaker, and cache-aside strategy.

EDUCATION

Federal University of Paraiba (UFPB)

2022 to Dec 2026 (expected)

Bachelor of Science in Computer Science

TECHNICAL SKILLS

Security: Application Security, web and API security, OWASP Top 10, WAF, Threat Intelligence, OSINT, IOCs/TTPs, MITRE ATT&CK, SOAR, SIEM, SQLMap, and OWASP ZAP

Engineering and DevSecOps: Go, Python, JavaScript, SQL, SPARQL, FastAPI, Streamlit, REST APIs, Git/GitHub/GitLab, Docker/Compose, GitHub Actions, CI/CD, and Linux

Data and Messaging: PostgreSQL, Redis, and RabbitMQ

Languages: Native Portuguese | Fluent English | Fluent Spanish
